

SuperGen and MGI PHARMA Announce Submission of MAA for Approval of Dacogen(TM) in Europe

DUBLIN, Calif. and MINNEAPOLIS, Oct. 1 /PRNewswire-FirstCall/ -- SuperGen, Inc. (Nasdaq: SUPG) and MGI PHARMA, INC. (Nasdaq: MOGN), today announced that a Marketing Authorization Application (MAA) seeking approval of Dacogen™ (decitabine) for injection has been submitted to the European Agency for the Evaluation of Medicinal Products (EMA) by SuperGen's European subsidiary, EuroGen Pharmaceuticals Ltd. Dacogen is the Company's investigational anti-cancer therapeutic for the treatment of patients with myelodysplastic syndromes or MDS. MGI PHARMA has exclusive worldwide rights to the development, manufacture, commercialization and distribution of Dacogen.

"We are very pleased to have completed this regulatory milestone for Dacogen," said Dr. James Manuso, President and Chief Executive Officer of SuperGen. "SuperGen remains committed to bringing Dacogen to patients as quickly as possible, with the support of our new partner, MGI PHARMA."

"The MAA submission for Dacogen marks a key regulatory milestone," said Lonnie Moulder, President and Chief Executive Officer of MGI PHARMA. "We believe that Dacogen will become an important treatment option for hematologic cancer patients, and we look forward to the upcoming U.S. NDA filing as the next regulatory milestone."

SuperGen completed Phase III clinical trials of Dacogen in patients with MDS in March 2004. SuperGen and MGI are collaborating on the regulatory development process for Dacogen in MDS, and expect to complete the NDA filing during the fourth quarter of 2004. MGI PHARMA plans to initiate a Phase III trial of Dacogen for the treatment of acute myelogenous leukemia (AML) in early 2005 and plans to evaluate Dacogen for further development in other hematologic malignancies. Alternative dosing schedules for Dacogen, including subcutaneous administration and more rapid intravenous infusions, are currently being evaluated in clinical studies.

About Dacogen

Dacogen is an investigational drug. It has not yet been approved for marketing in the U.S. or by other regulatory agencies in their respective countries; therefore, safety and efficacy have not yet been established in any patient population. In clinical trials, Dacogen has been shown to have a broad spectrum of activity in several hematological malignancies as well as solid tumors. Dacogen belongs to a class of drugs called hypomethylating agents, with a unique mechanism of action. Methylation is a process in which methyl (CH₃) groups are added to DNA which may inactivate or "silence" tumor suppressor genes.

About MDS

MDS is a cancer of the bone marrow that is often fatal. Some cases of MDS progress to leukemia. According to the Aplastic Anemia and MDS International Foundation (<http://aamds.org/>), 20,000 to 30,000 new cases of MDS are diagnosed annually in the United States. The number of new cases diagnosed each year is increasing. The average life expectancy for patients diagnosed with MDS is 6 months to 5 years, depending on the severity of the disease.

About SuperGen

Based in Dublin, California, SuperGen is a pharmaceutical company dedicated to the acquisition, rapid development and commercialization of therapies for solid tumors, hematological malignancies and blood disorders. SuperGen's product portfolio includes Orathecin™ (rubitecan) capsules, an investigational drug intended for the treatment of pancreatic cancer; Nipent® (pentostatin for injection); Mitomycin (generic brand of Mitomycin®); and SurfaceSafe® cleaner.
